

How to Python (Anaconda)

To use the Shimadzu gadget, Python 3.x Anaconda 2.5.1 version or later is required. This document describes how to install Python (Anaconda).

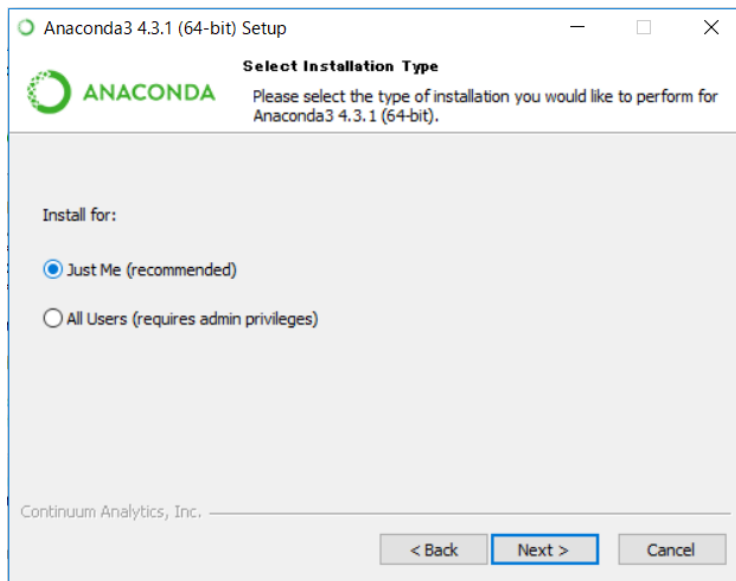

1. Double click on the downloaded [Anaconda 3-4.3.1 - Windows - x86_64.exe]. The [Welcome to Anaconda 3-4.3.1 (64-bit) Setup] dialog is displayed. Click [Next].

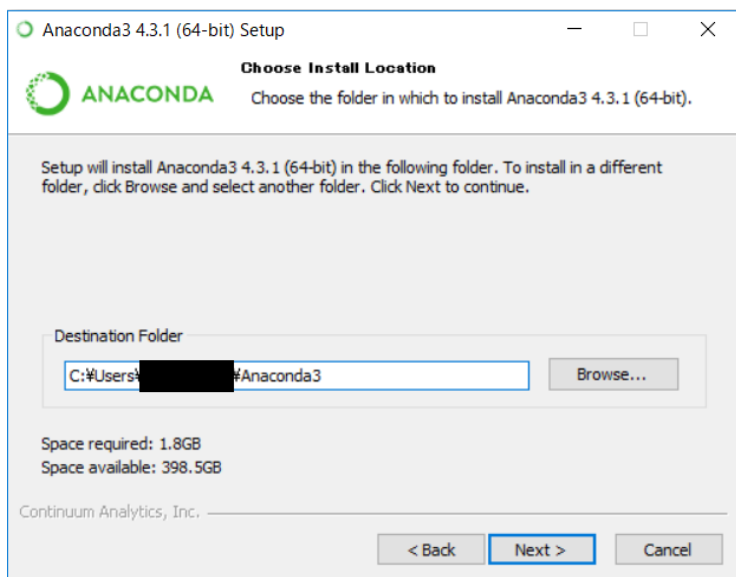

2. The [License Agreement] dialog will be displayed. Click [I Agree].

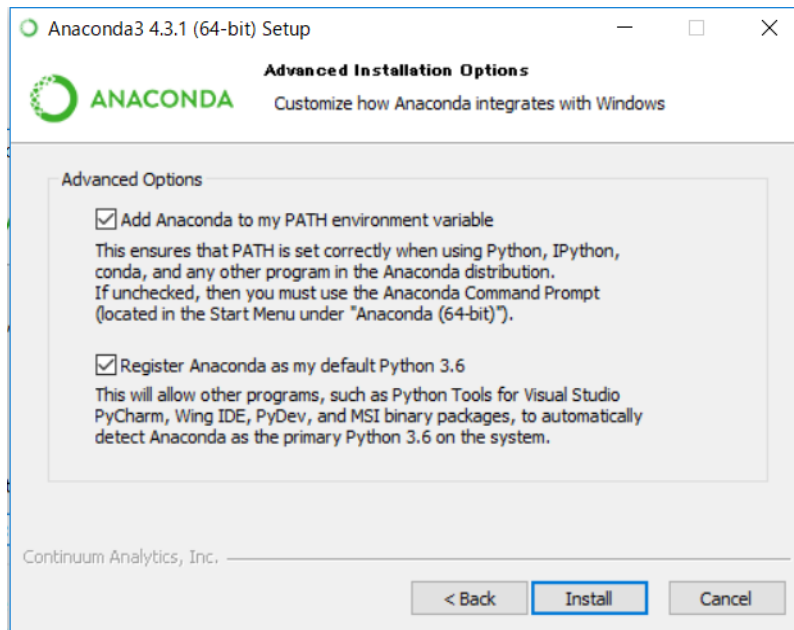

3. The **[Select Installation Type]** dialog will be displayed. Select **[Just me]** and click **[Next]**.

4. The **[Choose Install Location]** dialog will be displayed. Click **[Next]**.

5. The **[Advanced Installation Options]** dialog will appear. Click the checkboxes of **[Add Anaconda to my PATH environment variable]** and **[Register Anaconda as my default Python 3.6]** to select it. Click **[Install]** to start the installation.

6. The **[Installation Complete]** dialog will be displayed. Click **[Next]**.

7. The **[Thanks for installing Anaconda!]** Dialog will be displayed, so click **[Learn more about Anaconda Cloud]**. Click **[Finish]** to complete the installation.
